 BERETTA

APX Pistol

Striker fired pistols are becoming an important segment worldwide for the Military & Law Enforcement sector. The Beretta APX, utilizes a removable, serialized chassis frame, that can be easily modified with a replaceable grip frame and is simple to disassemble and maintain.

The APX's extremely low profile and snag free design make it easy to carry and draw from a holster. Ease of use was the key driver in the development of the APX.

Beretta APX pistols have a unique feature that allows the user to deactivate the internal striker mechanism prior to disassembly. This means the pistol can be field stripped without pulling the trigger.

The high-definition 3-dot sight system is designed for quick target acquisition. The removable sights can be replaced with other types of sights.

# APX Pistol Features
