M9A3 Pistol

 BERETTA

Multiple Configurations Available

M9A3 semi-auto pistol was designed to deliver the performance that military, law-enforcement and VIP-protection professionals demand, making it perfect for any tactical use, including home and personal defense, tactical competitions, as well as combat missions in any condition.

M9A3 has many versatile features that make it a favorite among all. The Vertex-Style, thin, vertical grip provides a simple trigger-reach and consistent, accurate aiming. Plus the crisp checkering on the front- and backstrap with the removable wraparound grip make any combat hold simple and consistent.

Shown with suppressor and Steiner DBAL-PL

The universal slide easily converts the M9A3 from FS to G mode, meaning the safety lever can be used in safety-decocker mode or perform in decocker-only. A variety of accessories are attachable with the built-in 3-slot MIL-STD-1913 rail. All these elements plus the removable front sight, beveled magazine well, and oversized magazine-release button make the M9A3 an easy-to-use, high-performance, low-maintenance weapon of choice.
